Professional Summary

Senior Frontend Developer with 8+ years of experience building high-performance web applications and managing complex data systems. Specialized in architecting scalable solutions, optimizing performance for large datasets, and designing user-centric interfaces. Proven ability to work with hundreds of thousands of database records, implement real-time synchronization, and handle complex business logic. Mentored junior developers and collaborated directly with C-level executives on architectural decisions.

Technical Stack

Frontend

Vue 2/3 (Composition API, <script setup>), TypeScript, Vuetify 2/3, Pinia, Vuex, Vue Router, Vue i18n, Vite

Performance & Data

Web Workers, IndexedDB (advanced indexing), REST API, WebSockets, Geolocation APIs (Google Maps, Geoscape)

Backend (Foundational)

Node.js, Express, File System (fs), REST API design

DevOps & Tools

Git, Firebase Auth, Docker (user-level), CI/CD (user-level), GitHub

Additional

Sortable.js, CSS Cascade Layers, Figma, SEO, Accessibility (a11y)

Professional Experience

Senior Frontend Developer

Feb 2025–Present | Lviv, Ukraine

ITNET

VD-Express — Bus Ticket Booking Platform

Role: Built frontend from scratch for international bus transportation service.

Vue 3

TypeScript

Vuetify 3

Pinia

Vite

Firebase Auth

Architecture & Key Achievements

- **Runtime-loadable theme system:** App fetches configuration (palette, fonts, CSS, content) on startup, enabling deployment for new brands without frontend rebuild
- **Multi-step booking flow:** Search → route selection → seat selection → transfers → payment → confirmation, with state preservation
- **Real-time synchronization:** WebSocket connection with automatic reconnection for live seat availability and booking status
- **Geolocation transfers:** Interactive map-based pickup/dropoff selection with cost calculation
- **Localization:** uk/en/de via vue-i18n with locale-specific formatting
- **Firebase authentication:** Email/password, SMS+reCAPTCHA, Google OAuth
- **SEO & AI-friendly:** Dynamic meta-tags optimized for search engines and AI crawlers (GPTBot, ClaudeBot)

Senior Frontend Developer

Sep 2019–Sep 2023 | Australia (Remote)

DGtek

DGtek Provisioning Portal — B2B platform for a fibre network operator

Role: Sole frontend engineer across 14 repositories (~72,000 lines): an admin dashboard, a reseller cabinet and a public entry app, over 100k+ customer and building records serving resellers, supervisors, managers, technicians and administrators. [Read the full case study →](#)

Key Contributions

- **Web Worker data layer:** moved all API traffic, credentials and a versioned IndexedDB cache (10 object stores with secondary indexes) off the main thread behind a single { route, action } message boundary, keeping data-heavy tables responsive and tolerant of a dropped connection
- **Reporting computed on the client:** monthly revenue, churn and ARPU derived in the worker by walking IndexedDB cursors over cached customers and services, rendered with Google Charts — removing a class of slow report endpoints
- **Geospatial serviceability search:** Google Maps + Geoscape, serviceability polygons and building markers by status, point-in-polygon lookup with a fallback chain for addresses Google will not geocode, and in-map editors for polygons and pits
- **Build-cost calculator:** priced a fibre haul from a building to the nearest pit (trenching, underboring, pit types, reinstatement, traffic management) and exported a client-ready PDF quote
- **Smart scheduling and role-based access:** auto-generated connection schedule from reseller requests and crew availability with rescheduling, reseller ticketing with live status, supervisor access control
- **7 published npm packages:** map/worker layer, cost calculator, polygon and pit editors, two address-autocomplete components and date utilities, shared by three applications on independent release cycles

Frontend & Backend Developer

2019–2022 | Remote

Pineapple

CMS for Dynamic Landing Page Generation

Role: Built complete CMS (frontend and backend) for dynamic landing page creation.

Features Developed

- Dynamic landing page creation with publish/hide lifecycle management
- Content editing down to button functionality configuration
- Dynamic survey form builder with customizable field types
- **Backend:** Node.js + Express, file-system based (no database), JSON-based landing storage

Core Competencies

Performance & Optimization

Web Workers + IndexedDB for large datasets, bundle optimization, LCP/FID/CLS tuning, profiling and diagnostics

Architecture & Design

Scalable application architecture, state management patterns, component-driven development, API integration

Real-time Systems

WebSocket synchronization, multi-app data sync, offline-first strategies, automatic reconnection logic

Accessibility & SEO

Semantic HTML, ARIA attributes, screen reader testing, dynamic meta-tags for crawlers

Mentoring & Leadership

8+ years teaching junior developers, C-level stakeholder communication, project delivery, client negotiation

Education

Kharkiv National University named after V.N. Karazin

Higher Education

Languages

UA **Ukrainian** Native RU **Russian** Fluent GB **English** Upper-Intermediate
